

CYPRUS 2016 4th International Conference  
on Sustainable Solid Waste Management

23rd - 25th June 2016  
Limassol, Cyprus

# Valorisation of Woody Biomass Bottom Ash in Portland Cement: A Characterization and Hydration Study

V. Sklivaniti<sup>1</sup>, P.E. Tsakiridis<sup>2</sup>, N.S. Katsiotis<sup>1</sup>, D. Velissariou<sup>1</sup>, N. Pistofidis<sup>3</sup>, D. Papageorgiou<sup>3</sup>  
M. Beazi<sup>1</sup>

<sup>1</sup> Laboratory of Inorganic & Analytical Chemistry, School of Chemical Engineering, N.T.U.A.

<sup>2</sup> Laboratory of Physical Metallurgy, School of Mining and Metallurgical Engineering, N.T.U.A.

<sup>3</sup> Titan Cement Company SA, Group R&D and Quality Department, Athens, Greece

**CYPRUS**  
23 - 25 June

**2016**

**4th International Conference**  
on Sustainable Solid Waste Management  
Limassol, Cyprus

# Contents

- **Introduction**
  - Environmental Issues
  - Bottom/Fly Ash Production
  - Valorization of Ash
  - Portland cement
- **Materials & Methods**
- **Results**
  - Woody Bottom Ash Characterization
  - Blended Cement Hydration
- **Conclusions**

**CYPRUS**  
23 - 25 June

**2016**

**4th International Conference**  
on Sustainable Solid Waste Management  
**Limassol, Cyprus**

# Environmental Concerns

- **Research for Alternative renewable energy resources/  
Alternative Raw Materials**
  - Benefit of the economical cost
  - Reduction of the environmental impact
- **Energy Substitutes could lead to a relative increase of  
wasted produced, during the incineration process**
  - Bottom ash
  - Fly ash

**CYPRUS**  
23 - 25 June

**2016**

**4th International Conference  
on Sustainable Solid Waste Management**  
**Limassol, Cyprus**

# Bottom/Fly Ash Production

## Bottom ash

- produced in the boiler first combustion chamber
- main part of the ash generated,
- mixed with other impurities

## Fly ash

- collected primarily in cyclones, which are located behind the combustion unit
- and in electrostatic and/or bag filters
- may be rich in heavy metal contaminants

**CYPRUS**  
23 - 25 June

**2016**

**4th International Conference**  
on Sustainable Solid Waste Management  
**Limassol, Cyprus**

# Waste to Energy Incinerator

**CYPRUS**  
23 - 25 June **2016**

**4th International Conference**  
on Sustainable Solid Waste Management  
**Limassol, Cyprus**

# Valorization of Ash

- From biomass for energy production
- Material chemical constituents can vary considerably but all ashes include:
  - Silicon Dioxide ( $\text{SiO}_2$ )
  - Calcium Oxide ( $\text{CaO}$ ) also known as Lime
  - Iron (III) Oxide ( $\text{Fe}_2\text{O}_3$ )
  - Aluminum Oxide ( $\text{Al}_2\text{O}_3$ )
- Environmental regulations in Europe obligate to the choice of recycling and reuse
- Disposal cost is very high at controlled landfills
- Utilization Pathways as
  - raw material in ceramic industry
  - filler material in road bases construction
  - neutralize agent for wastes with high acidity,
  - glazing Material
  - filler material in concrete
  - substitute in cement, mainly because of its high alkali content

**CYPRUS**  
23 - 25 June

**2016**

**4th International Conference**  
on Sustainable Solid Waste Management  
**Limassol, Cyprus**

# Portland cement

“Cement is a crystalline compound of calcium silicates and other calcium compounds having hydraulic properties”

- Hydraulic ability: to set and harden under or with excess water through the hydration of the cement's chemical compounds or minerals
- There are two Reaction Mechanisms:
  - Activation with the addition of water (Hydration Reaction)
  - Development of hydraulic properties when the interact with hydrated lime  $\text{Ca(OH)}_2$  (Pozzolanic Reaction)
- Waste derived or by-product materials can be utilised from cement industries in multiple ways:
  - to replace primary raw materials used in the cement clinker recipe •
  - to substitute conventional fuels such as coal, coke, and gas.
  - to be utilised as additives in the production process of constituent cements to meet the requirements of EN 197-1

**CYPRUS**  
23 - 25 June

**2016**

**4th International Conference**  
on Sustainable Solid Waste Management  
**Limassol, Cyprus**

# Materials & Methods

- .The cement used in all mixtures was a CEM I 52.5 Ordinary Portland Cement (OPC)
- .The bottom ash had been generated after the combustion of olive plants trimmings in wood-fired boilers

Table 1.Composition and characteristics of cement mixtures

Code	CEM I 52.5N (wt%)	WBA (wt%)	Specific Surface Area (cm <sup>2</sup> /g)	Specific Gravity (g/cm <sup>3</sup> )
C <sub>Ref</sub>	100	0	3870	3.14
C <sub>2</sub>	98	2	3870	3.13
C <sub>3</sub>	97	3	3870	3.12
C <sub>5</sub>	95	5	3875	3.10
C <sub>7</sub>	93	7	3875	3.08
C <sub>10</sub>	90	10	3880	3.06

# Materials & Methods

- **Particle size distribution**
- **Chemical analysis**
  - X-ray Fluorescence & Atomic Absorption Spectrophotometry
- **Crystalline phases of both WBA and CEM I 52.5**
  - XRD analysis
- **Semi-quantitative phases analysis**
  - Rietveld Algorithm
- **The morphology of WBA**
  - Scanning Electron Microscopy (SEM) & Transmission electron microscopy
- **Hydration Study**
  - XRD analysis & TG/DTA

# Results-Woody Bottom Ash Characterization- Chemical analysis

**Table 3** Chemical analysis and physical characteristics of cement and ash used

Oxides	Chemical Analysis (wt%)	
	CEM I 52.5N	WBA
SiO <sub>2</sub>	21.25	6.84
Al <sub>2</sub> O <sub>3</sub>	3.77	2.73
Fe <sub>2</sub> O <sub>3</sub>	4.27	1.39
CaO	64.35	<b>31.41</b>
MgO	1.25	2.45
K <sub>2</sub> O	0.44	<b>12.31</b>
Na <sub>2</sub> O	0.12	0.11
SO <sub>3</sub>	2.40	0.14
TiO <sub>2</sub>	0.23	
free CaO	0.15	1.60
Cl	0.018	0.05
LOI	1.25	41.49
Physical Characteristics		
Specific surface (cm <sup>2</sup> /g)	3870	3930
Specific gravity (g/cm <sup>3</sup> )	3.14	2.35

# Results-Woody Bottom Ash Characterization- WBA phase composition by Rietveld analysis

**Table 2.**WBA phase composition by Rietveld analysis

Phases	Composition (wt%)
	WBA
$\text{CaCO}_3$ - Calcite	67.6
$\text{K}_2\text{CaCO}_3$ - Fairchildite	8.7
$\text{SiO}_2$ - Quartz	7.8
$\text{Ca}_3\text{Al}_2\text{Si}_3\text{O}_{12}$ - Grossular	6.5
$\text{K}_2\text{SO}_4$ - Arcanite	4.1
$\text{CaSO}_4 \cdot 0.5\text{H}_2\text{O}$ - Bassanite	2.5
$\text{CaO}$ - Lime	1.6
$\text{CaMg}(\text{CO}_3)_2$ - Dolomite	1.2

## Woody Bottom Ash Characterization- Scanning electron micrographs of WBA.

**Figure 3:** Scanning electron micrographs of WBA. a:  $\text{CaCO}_3$ , b:  $\text{K}_2\text{CaCO}_3$ , c:  $\text{SiO}_2$ , d:  $\text{Ca}_3\text{Al}_2\text{Si}_3\text{O}_{12}$   
e:  $\text{K}_2\text{SO}_4$ , f:  $\text{CaSO}_4 \cdot 0.5\text{H}_2\text{O}$ , g:  $\text{CaO}$

## Results-Blended Cements

**Table 4.** Physical properties of blended cements

Sample	WBA (wt%)	Water Demand (wt%)	Setting Times (min)		Le Chatelier Expansion (mm)
			Initial	Final	
C <sub>Ref</sub>	-	26.60	120	165	0.5
C <sub>2</sub>	2	27.40	175	250	0.6
C <sub>3</sub>	3	28.20	70	225	0.7
C <sub>5</sub>	5	29.20	50	170	0.9
C <sub>7</sub>	7	31.75	<40	150	1.2
C <sub>10</sub>	10	32.40	<40	120	1.7

## Results-Blended Cements - Strength development

on Sustainable Solid Waste Management**  
Limassol, Cyprus

# Conclusions

-- Woody bottom ash (WBA) is:

- combustion by-product of olive plants trimmings in wood-fired boilers, is
- carbonate fine grained material, consisting mainly of calcite ( $\text{CaCO}_3$ ) and secondarily of fairchildite ( $\text{K}_2\text{CaCO}_3$ )

--Substituting Portland cement can be used as a filler material,

- shorter setting times
  - higher water demand
  - hydration rate acceleration.
  - relatively lower compressive strengths at all ages
- Up to 7 wt% substitution can be satisfied the requirements for strength class 42.5 as per EN 197-1
